

Mexico City, 2024

Dear Customer,

As per local regulations if any wooden pallet is used, it must contain proper stamp of wooden treatment, so written certification is not enough.

It's recommended to use plastic pallets instead and be noted that **ANY wood**, even a slice of wood, used to fix cargo **must be treated and certificated** so to avoid future challenges at destination use other type of materials when shipping to Mexico.

Note: In case of lack of stamp, **any extracharges to certify wooden treatment will be invoiced to correspondent party at origin** to avoid delaying cargo longer.
